

xtd::network::http
::cpptempl::Data

```
graph BT; A["xtd::network::http::cpptempl::DataValue"] --> B["xtd::network::http::cpptempl::Data"]
```

The diagram illustrates an inheritance relationship between two classes. At the bottom is a gray-shaded box representing the base class, `xtd::network::http::cpptempl::DataValue`. A blue arrow points vertically upwards from this box to a white box above it, representing the derived class, `xtd::network::http::cpptempl::Data`. Both boxes have a black border and contain their respective namespace-qualified names on two lines.
